LMH Four Unit Shelter

The LMH Shelter is simple transitional housing suppling safety, privacy, hygiene, communications and storage. The LMH allows individuals and families, the platform required for transition back to normal life without living in open, tented or dorm style conditions.

Here are the perspectives and plan views of our LMH 4-unit model.

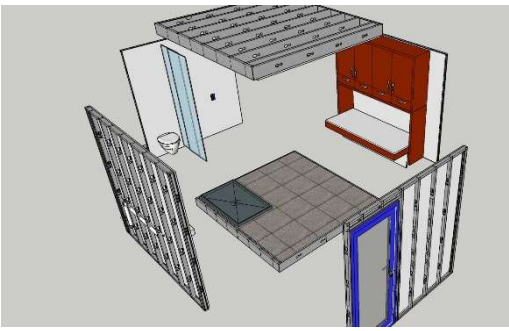
ORGANIZATION AND SUMMARY

Ecobaun are construction experts with strong individual backgrounds delivering various large commercial and housing projects throughout the Western U.S for over 25 years. We decided to focus on housing solutions plaguing every major city in the US. We are the designer and owner of the LMH Shelter and “Living Modules”.



The LMH Shelter is simple transitional housing suppling safety, privacy, hygiene, communications and storage. The LMH allows individuals and families, the platform required for transition back to normal life without living in open, tented or dorm style conditions.

LMH low delivery costs contribute to more flexibility in government planning for housing counts and critical support services. LMH offers a fresh alternative to deploy scalable, safe and reliable housing.

The LMH shelter will support any program design requirements. These units are reliable and easily assembled. The unique design allows maintenance replacement or floor plan upgrade.

The facts are simple. Being homeless affects a community. Government should address the crisis as a life safety issue and not through typical building and planning. The support solutions should be scalable and reliable for long term use and with a transitional understanding.
